Professional Summary

Full-Stack Software Engineer with 3+ years of experience building scalable web applications and backend systems using Go, Node.js, Python, React, and PostgreSQL. Built real-time platforms supporting 100K+ GPS devices, SaaS systems used by 200+ organizations, and high-throughput services processing millions of daily events. Experience with microservices, event-driven systems, cloud infrastructure, and GenAI/RAG workflows.

Experience

Full-Stack Software Engineer

January 2026 – August 2026

Roadcast Tech Solutions Pvt. Ltd., Delhi, India (OnSite)

Tech: Go, Python, GraphQL, Angular, PostgreSQL, Redis, Kafka, Docker, GitHub Actions.

- Built a roster management system for 2,000+ concurrent users and 80K+ daily attendance events, reducing scheduling conflicts by **40%** based on tenant operational feedback.
- Built a configurable multi-tenant HRMS used by **200+ organizations**, enabling tenant-specific workflows without code changes.
- Built a fleet platform processing **15M+ daily GPS location points** from **100K+ active devices** using real-time ingestion pipelines.
- Developed a shared IAM service with RBAC and secure sessions across 20+ applications, maintaining **sub-15 ms authentication latency**.
- Rebuilt a Go reverse-geocoding service serving 6M+ records with **20 μ s lookup latency**, reducing CPU usage by **55%** measured via production telemetry.
- Built a RAG-based log analysis system using vector search and LLM tool calling, reducing MTTR by **45%** tracked across incident retrospectives; reduced Docker image sizes from 2 GB to **200 MB**.

Associate Software Engineer

May 2023 – January 2026

Bioqube Matrics Pvt. Ltd., Noida, India

Tech: Node.js, React, Go, Python, FastAPI, PostgreSQL, Docker, RabbitMQ, GitLab CI/CD.

- Built an embedding-based face recognition pipeline for IP camera streams with sub-**120 ms inference latency**.
- Built a real-time crowd management platform processing **1,200+ people/sec** at 85% counting accuracy using FastAPI, PostgreSQL, and React.
- Developed a shared Node.js/Fastify IAM service for 5 applications, removing **70% of duplicated authentication code** by standardizing core identity middleware.
- Built an asynchronous Go/RabbitMQ media pipeline processing **10K+ image and video jobs daily**.
- Reworked facial recognition services into microservices, reducing recognition latency by **50%** and inference cloud costs by **40%** verified in production load tests.
- Built OCR-based identity verification workflows that reduced manual onboarding time by **85%** based on end-user KYC turnaround audits.

Projects

BeyondEvent - Distributed Event Simulation Platform

[BeyondEvent.com](#)

Tech: React, Node.js, PostgreSQL, Redis, Socket.IO, Docker

- Built a distributed event simulator that lets developers design microservice topologies and observe event propagation across **50+ simulated services**.
- Added event persistence, tracing, and state replay using Socket.IO, Redis Pub/Sub, and PostgreSQL with sub-**10 ms event propagation**.

MediaEngine - Distributed Media Processing Engine

[GitHub](#)

Tech: Go, NATS JetStream, PostgreSQL, S3, Docker, Concurrency

- Built a Go-based media ingestion pipeline with parallel multipart uploads, reducing server memory overhead by **65%** under peak load stress tests.
- Added NATS JetStream workers for metadata extraction and transcoding, processing **500+ jobs/min** with PostgreSQL-backed task state.

LogMind - LLM-Powered Log Intelligence Platform

GitHub

Tech: Python, FastAPI, PostgreSQL, Elasticsearch, RAG, LLM

- Built an LLM-powered log intelligence platform aggregating distributed system logs, indexing **100K+ log records** to automate failure analysis and diagnostic triage.
- Implemented **RAG-based vector search** over application logs and incident runbooks, achieving sub-**200 ms retrieval latency** for context-aware root-cause analysis.

Technical Skills

- Languages:** Go, Python, TypeScript, JavaScript, SQL, Bash
- Backend:** Node.js, NestJS, Fastify, Express.js, FastAPI, Gin, Chi, REST, GraphQL, WebSockets, gRPC
- Frontend:** React, Next.js, Angular, Zustand, Redux, Tailwind CSS
- Databases & Messaging:** PostgreSQL, MongoDB, Redis, Elasticsearch, Kafka, RabbitMQ, NATS JetStream, AWS S3
- Cloud & DevOps:** Docker, Kubernetes, AWS (EC2, S3), GitHub Actions, GitLab CI/CD, Linux, Nginx
- Architecture & Testing:** Microservices, Event-Driven Architecture, Distributed Systems, Asynchronous Processing, Concurrency, Jest, PyTest, Go Test, TDD, Integration Testing
- AI/ML:** LLMs, RAG, Vector Search, LLM Tool Calling, Computer Vision, Face Recognition, OCR

Education

Bachelor of Computer Applications (BCA) – Computer Science

2021 – 2024

Maharshi Dayanand University

Rohtak, India
